P1300
ZERO SPEED SENSOR. MAGNET ACTUATED
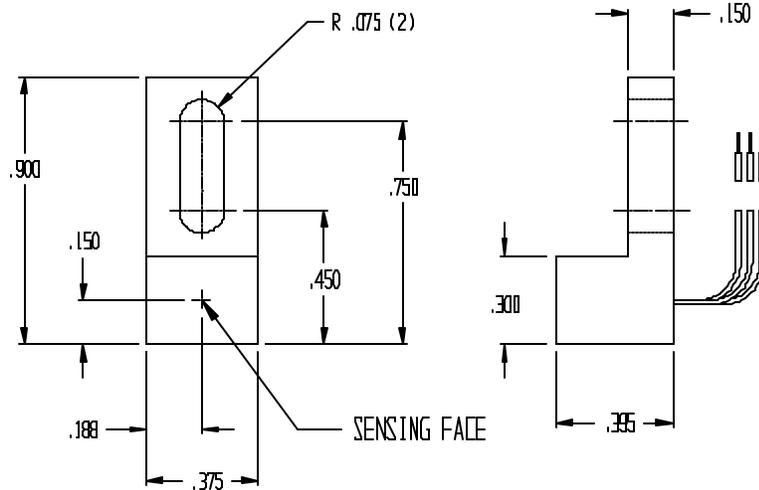

Sensor Description:

The P1000 Series sensor is a non-contact, solid state device that is magnetically actuated for a variety of speed applications. The P1300 Series sensor is produced to a tight magnetic tolerance around the zero Gauss level to provide a 50% duty cycle over the operating full frequency range. With the additional advantage of low hysteresis, this device is ideal for operation with high-density multi-pole magnet target wheels and large air gap applications, along with providing the position repeatability needs for motor commutation applications. It is capable of reading speeds from zero to 100 kHz.

Features:

- Digital Output Signal
- 4-24 VDC Operation Range
- Current Sinking Output
- 20ma Continuous Operation

- Reverse Polarity Protection
- 0 to 100 kHz Operation
- Temperature Compensated
- Operation from –40°C to 125°C
- Rugged, thermoplastic housing

## PART NUMBER   SENSOR DESCRIPTION

P1300   24 AWG leads, 36" long

Functional Block Diagram

NOTE: A pull-up resistor is required on the open collector output to establish a quiescent voltage level. The pull-up resistor also provides faster rise times and improves noise immunity. Contact the factory for application assistance.

Magnetic Characteristics: (V_{CC} = 4.5 to 24 VDC @ 25°C)

Characteristics	Symbol	Limits			Units
